SEAMLESS EPOXY FLOORING PROVIDES DURABILITY AND AESTHETICS

Flooring is an important decision to make for the home, commercial business, or industrial sector. Every type of flooring has its benefits and its drawbacks. However, seamless **epoxy flooring** provides numerous benefits in a cost effective way.

Epoxy floor coating is a flooring surface made up of multiple layers of epoxy applied to the floor to a depth of less than two millimetres. Epoxy is made up of resins and hardeners. The resin and hardener are mixed together to chemically react. This forms a rigid plastic material that is strong, resistant to degradation, and which bonds extremely well to its substrate.

Epoxy floors are incredibly strong and can be used in the most demanding industrial environments as well as provide a beautiful addition to a regular trafficked floor. High grade epoxy resin is used to upgrade surfaces, obtain coloured effects, protect floors against corrosion, and achieve a water tight effect. All of these qualities provide longer durability of surfaces.

Epoxy Flooring can breathe new life into old floors. It is able to be applied to existing floors as well as new ones. The coating is a great method to makes sure commercial or shop floors will look their best and the finish will last for many years. Epoxy will protect floors with a plastic-like finish.

It comes in a variety of colours and styles. A simple, solid colour epoxy floor is perfect for industrial companies. This colour can be chosen from a standard colour palette. There is also the option of adding colour flakes and a clear coat, giving floors a showroom appearance. Materials used to make epoxy floors are stronger than concrete.

Coating used in seamless floors is UV resistant against rain and sunlight, designed to shine for years. Epoxy coating is very easy to clean and it does not pick up dust. The installation is simple and quick. It

can be used in any place where flooring is required and provides a perfect finish.

Epoxy floor coating provides a sanitary and skid-proof surface even when wet. It is dust free and resistant to acids, suitable for any industry. [Epoxy Flooring](#) adheres well to surfaces made of concrete, metal, tiles, wood, and more. It has high resistance to abrasion and chemicals such as alkalis, gasoline, greases, thawing salts, and solvents. Adding coloured silica makes the floor attractive.

Attractive epoxy floors will make any area beautiful and will increase the value of the structure the floors are being installed in. [Epoxy Flooring](#) will protect and extend the life of concrete if applied over the previous concrete flooring. Epoxy floors are easy to clean and are amazingly resistant to bacteria.

Epoxy protects against oil and chemicals, meaning less dirt and dust debris will be tracked into the home or business. Epoxy provides a waterproof barrier that is resistant to mould. Radon gas emissions are reduced when choosing to install an epoxy floor. Epoxy provides a unique and durable flooring application with many customizable options and light reflectivity.

Every floor project is unique. Coating solutions will add value to the floor by making it shiny, better-looking, more efficient, and better protected. Applicators are committed to provide a personalised floor coating system and specification solutions per every flooring need.

Expert and experienced professionals will proficiently test and prepare the floor using state of the art methods. This is followed by installation of floor coatings that are suitable per each floor requirements.

There is another kind of epoxy floors called flake epoxy seamless floors. These are versatile and can be used for water-exposed surfaces. This application method offers diverse size flake and a limitless colour range with many regular colours.

These floors are personalised to suit the needs of the company. Most floor and wall surfaces can receive flake epoxy coating, including concrete, wood, bricks, tiles, metals, enamels, and bench tops.
